Airport Carbon Accreditation Policy

As the operator for Lynden Pindling International Airport (LPIA), The Nassau Airport Development Company (NAD) makes every effort to minimize the impact of airport operations on the local and global environment. A key factor was identifying the main sources of our carbon emissions that have the greatest impact on the environment, namely electricity and fuel, and understanding how each affects our total carbon footprint.

We pledged our commitment to reducing all carbon emissions at LPIA through joining the Airport Carbon Accreditation (ACA) Programme under the auspices of Airports Council International (ACI). As the only institutionally endorsed carbon management certification standard for airports, ACA allows us to implement best practice carbon management processes and gain public recognition for our achievements through the attainment of accreditation at different levels of participation.

More specifically, to ensure the effectiveness of the programme, we will monitor our carbon emissions through the Airport Carbon and Emissions Reporting Tool – ACERT (which calculates emissions at and around the airport), implement green initiatives along with the promotion of smarter green practices, and report to ACA annually, which will all assist in maintaining certification levels.

We understand the collective responsibility that NAD and the airport community has in climate protection. Our participation in the ACA Programme will help to incentivize all airport users through increased awareness and ultimately allow LPIA to become a carbon neutral airport by 2050. We look forward to working with all on building a sustainable future!
